# INSTALLATION INSTRUCTIONS

for Positionable STB

1. Lubricate O-Ring with system compatible lubricant. FKM O-rings are standard, other options are available upon request.

2. Screw the Straight Thread End into Port until the washer contacts the face of the port and the O-ring squeezes into the tapered section.

3. Unscrew the fitting (1 turn max) until the tube end is facing the desired direction.

4. Hold the fitting in place and tighten the locknut into place until the washer is properly compressed into the tapered port. Consult SAE J1926 specifications for recommended installation torques.

## COMPONENT REPLACEMENT PARTS

Ferrule sets and Nut/Ferrule sets make for easy storage and handling. CBC-Lok® & CS-Lok® components are precision made and should be handled with care. The components can be ordered on an arbor, which aids in careful handling and prevents them from coming off. Pinch the end of the arbor to release the components.

## TYLOK PRE-SET TOOL

The CBC-Lok®/CS-Lok® product line offers a Pre-Set Tool when fittings need to be installed in hard to reach places. The Pre-Set Tool is designed to be used in any tabletop vise. After tightening the nut the specified number of turns, as stated in the included installation instructions, loosen the nut from the Pre-Set Tool. Once the ferrules have swaged into the tubing surface, the assembly is ready for installation. When ordering the CBC-Lok/CS-Lok Pre-Set Tool, reference the part number in the chart. The Pre-Set Tool is hardened for maximum durability. The Pre-Set Tool can be used repeatedly to set the ferrules onto the tubing for easy installation.

Tylok is now offering customized stainless steel AOD injection lance assemblies for refractory tube applications found in most steel mills.

AOD (Argon Oxygen Decarburization) is used during the refining process to produce steel with low carbon properties and low silicon levels, while creating a metal more weldable and more corrosion and heat resistant. It brings the tightest chemistry control to deliver the highest levels of metal purity. Most injection lances are replaced daily and in fact considered disposable items in most mills.

Tylok is now offering customized burner tubes suitable for most steel mills. The injection lances are available in 1/4", 3/8" and 1/2" diameters and offered in a variety of custom lengths.

Size	Part Number	Length Options (in.)	Degree Options
1/4	SS-4-INJ-LANCE-4MNPT-36	24", 36"	90"
3/8	SS-6-INJ-LANCE-6MNPT-36		
1/2	SS-8-INJ-LANCE-8MNPT-36		

Example: SS-4-INJ-LANCE-4MNPT is the straight version  
 SS-4-INJ-LANCE-4MNPT-36-90 is the 90 degree version

# Dielectric Fitting

Tylok Dielectric Fittings are insulated connections used to protect sensitive electrical components from electrical current potentially carried through tubing systems.

A typical application for a dielectric fitting is in the transmission of natural gas. The dielectric fitting insulates electric current flow that results from static electricity, ground currents, stray currents from instruments, etc.

Tylok dielectric fittings have a dielectric resistance above  $10 \times 10^7$  Ohms at 10 Volts (dc) when at room temperature (70°F / 20°C).

# INSTALLATION INSTRUCTIONS

## CBC-LOK®/CS-LOK® INSTALLATION INSTRUCTIONS

CBC-Lok®/CS-Lok® Tube Fittings come completely assembled & ready for use, no disassembly required. Although there are some general guidelines to follow, no special preparation of the tubing is necessary. In overhead applications, Tylok recommends using a Pre-Set Tool.

Size	Tighten # Turn(s)		
1 1/16"	3/4		SIZE #1 thru #3 Finger tight plus 3/4 turn
2 1/8"			
3 3/16"			
4 1/4"	1-1/4		SIZE #4 thru #16 Finger tight plus 1-1/4 turn
5 5/16"			
6 3/8"			
8 1/2"			
10 5/8"			
12 3/4"			
14 7/8"			
16 1"			

**NOTE:** DF Plugs, -NF (Nut & Ferrule Pre-Assemblies) require only 1/4 turn make-up.

Simply insert the tubing into the assembly, making sure the tubing seats firmly against the shoulder of the body and the nut is finger tight. High pressure applications and high safety-factor systems. Further tighten the nut until the tube will not turn by hand or move axially in the fitting.

Tighten nut with wrench the additional number of turns indicated above, while holding the fitting body with a second wrench.

## TO REMOVE TUBE & RE-CONNECT TUBE FITTING

Mark the location of the nut with reference to the body before disassembly. Back off the nut until it is clear of the body and remove the tubing from the fitting. For assembly, re-insert the tubing into the body until it is seated. With proper size wrench, re-tighten nut to original location by realigning previous marks. A noticeable amount of torque will develop when the nut is turned to original position. Next, rotate the nut slightly past original position to fully re-set the seal.

## TUBING SELECTION GUIDELINES

### General

- Free of nicks, scratches, and imperfections
- Suitable for bending and flaring
- Square cut ends

### Stainless Steel

- Types 304, 304L, 316, 316L, 317, or 317L per ASTM A213, ASTM A269, or equivalent.
- Fully Annealed, Seamless or Welded Redrawn, Maximum hardness of 80 HRB.

### Copper

- Seamless ASTM B75 Soft Annealed, ASTM B88 K or L Temper O, or equivalent.

### Carbon Steel

- ASTM A179 or equivalent, maximum hardness of 72 HRB.

## GAS SERVICE

Gases are generally less viscous than liquids allowing them to leak through imperfect seals. Tylok recommends tubing with minimal surface imperfections (nicks, scratches, etc.) and heavier walls for gas service applications. Heavy wall tubing offers more resistance to ferrules during installation which promotes a skiving effect that smooths out surface defects that would otherwise be leak paths. Thin wall tubing offers less resistance which promotes flexing rather than skiving resulting in a seal that may not be suitable for gas service. Refer to tubing pressure tables in this catalog for wall thickness recommended for gas services.

## PRECAUTIONS FOR WELD END

For best results when using Tylok tube fittings with weld ends, certain precautions should be taken:

- Remove the nut & ferrules from the fitting.
- Protect exposed threads & sealing surfaces from spatter.
- Use a heat sink to dissipate heat.
- Tack weld symmetrically to maintain alignment.
- When finishing welding remove weld spatter protection and make sure nuts and ferrules are in the proper orientation before assembling.

## SAFETY GUIDELINES

- Depressurize fluid systems before connecting, disconnecting or remaking a fitting.
- Follow Tylok's guidelines for proper fitting installation.
- Consult the factory before attempting to interchange Tylok fitting components.
- Don't exceed the recommended pressure ratings of system components.
- Use thread sealants when installing tapered pipe threads.
- Select fitting and tubing materials for best results.
- Never use a fitting to bleed pressure from a system.

## HEAT TRACEABILITY

Tylok Tube Fittings are heat code traceable back to mill heat of the material they were made from. Contact the factory for material certification requests.
